

The 4th International Conference On Proton Emitting Nuclei And Related Topics (AIP Conference Proceedings / High Energy Physics)

The conference covered a large spectrum of nuclear structure of proton rich nuclei, their production, selection and their decay. The range of subjects went from beta decay of nuclei closer to stability for the study of fundamental interactions, over studies of interest for nuclear astrophysics to the study of the most exotic proton-rich nuclei at the limits of nuclear stability. Beyond experimental and theoretical results on proton-rich nuclei, technical development for future experiments was also exposed.
